for SATB choir, virtual singer and video

(2020)

Stage plan

. There should be enough distance between the choir's compact formation and the projection screen to create a noticeable sense of otherness for the synth voice. The diagram below is therefore not a scale example.

. **Stage position #2** = From the audience's perspective, the sopranos and basses walk forward, sit or kneel to the left of the projector facing the screen, as close to it as they can get without obstructing the video projection. Tenors and basses, making sure to walk behind the projector, do the same but assemble to the right of the projector. Conductor joins the sopranos and basses. Obstruction to the audience's view of the video should be avoided at all costs.

Duration: ca. 8'

Add a public comment ... was written for Panorama Festival and premiered by Aarhus Vokalensemble and Charlotte Rowan in Aarhus, March 2020.

FULL SCORE

for SATB choir, virtual singer and video
(2020)

The piece is written for 16 voices (4 sopranos, 4 altos, 4 tenors, 4 basses). It is however possible to perform the piece with more or less singers. When the number of voices is different, appropriate changes to divisi must be made and there should be an equal number of each voice type.

Accidentals:

. The following quartertones are used in the piece:

. An accidental preceding a note only applies to the octave in which it is written. A further accidental is required for a note of the same pitch class in a different octave.

Props

. Each choir member should have a pre-prepared balloon, full of helium. It is advised that the balloon is sealed with something easily removable like a small peg or cable tie rather than tying off the end in a traditional knot. The balloons must be out of view from the audience until they are used, but easily accessible by any means available. Helium is safe and non-toxic but it is important that after each inhalation performers clear their lungs. These necessary exhalations are notated.

Clarification of techniques and non-standard notation (general):

	Most techniques and non-standard notation will be elaborated upon within the body of the score.
→	Move gradually and smoothly from one technique indication to another, for example, from senza vibrato to molto vibrato.
X	An X time signature indicates senza misura. It is often accompanied by a duration marking indicated in seconds.
⊖	Abruptly stop all sound. Make efforts to reduce the decay time of the previous note as much as possible
↑ ↓	The arrow noteheads denote the highest or lowest possible note of the singer's idiosyncratic range. Extreme measures should be made to reach these pitch e.g. falsetto for tenors and basses.
⌞	A flared hairpin means that short and sudden dynamic push right at the end of a note (almost like a sforzando)
retur(n)	When letter(s) at the end of a word are in parenthesis they are silent. The word should be stopped abruptly just before this point as if being interrupted. This direction is always paired with a staccatissimo articulation marking.
/n/ /Λ/ /θ/	IPA pronunciation can be listened at the following link: http://www.ipachart.com/
G.P.	General pause
→	A thick arrow denotes that the performer should continue or cycle a technique until the end of the arrow.
	Whispering: Never try to align the whispering with another singer. Hide mouth with the hand and lean close to the ear of the designated listener. For louder passages of whispering, direct the sound slightly away from the listener's ear to avoid damage. In the case of passages such as that starting at bar 53, cycle the boxed cells above the system in any order. Ad lib. tempo and take short pauses at will. The designated entry points are approximate and are cued by the conductor. The end of each instance of whispering is also cued by the conductor. It is the responsibility of the listener to pick up the conductor's cue and subtly make the whisperer aware. If you are the listener, maintain a deadpan facial expression and keep very still, looking straight forward.

Pre-recorded audio & video / laptop performer:

Animation by Jan Giedroyc.

Pre-recorded audio & video should be triggered by a laptop performer using QLab 4.6.1 or newer. The patch and all relevant audio/video files will be provided by the composer. It is of paramount importance that the performer has a good view of the conductor's beating pattern so they can activate the cues as precisely as possible within the tempo. It should not be obvious to the audience that the laptop performer is triggering the synth voice cues. As QLab is Mac only, as long as there is practically zero latency when triggering the cues, an alternative such as Max (Cycling '74) can be used to trigger cues.

15

Circled, bold numbers refer to exact, rhythmic cue points (these include new audio/video cues and points where an audio/video cue is manually stopped).

The synthesized voice is a virtual instrument developed by Plogue called *Alter/Ego*.

Detailed description: This is a page of a musical score for a vocal ensemble. It features six vocal parts: Soprano 1 (1), Soprano 2 (2), Soprano 3 (S.), Soprano 4 (4), Alto (A.), Tenor (T.), Bass (B.), Soprano Voice (S.Vox.), and Video (Vid.). The score is in 4/4 time and includes lyrics, performance instructions (mf, sim., sfz, ppp), and dynamic markings. The lyrics are: 'er com - mu(nicate) Shh! Noth-ing will ev - er com - mu - ni - cate hu(man)'. The S.Vox. part has numbered measures 21-25 with lyrics: '...for my ears. I never get tired of hearing you sing. World ...'. The Vid. part shows a video track with a play button icon.

B. goo(d) /d/

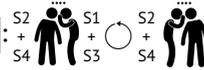

Vid. ♩ = ca.68 choir's text fades in and out whilst Quinn spins 180 degrees before returning to 'idle mode'

* - Pulsing to the held note should be created by hitting the mouth between the lips with the side of the index finger in the notated rhythm (hand in a clenched fist, in the same position as a cough). The pitch should remain the same. You do not need to hit very hard to achieve the desired stopping and starting to the held note, however, the faster the rhythm, the closer the hand should be to the mouth. As an example, the hand keeps constant contact with the mouth during the 32nd notes whilst rapidly alternating between pushing further in and out of the mouth with the hand.

Cond. Quinn remains on screen in 'idle mode', choir's text fades in and out but it's upside down
sim. + series of YouTube comments
conduct, following tempo of synth

* - x-notehead grace-notes before the beat should be performed as airy, voiceless (pitchless) consonants that smoothly transition into the next notated sound.

** - The damp symbol indicates that you should cut off the sound very abruptly by closing the mouth, to mimic reversed singing (where the attack of each word comes at the end)
