

The Years of Light

- 2013 -

Christian Mason

Instrumentation: for mixed ensemble of 25 players, 2 voices and conductor

While individual instruments have a variety of functions and changing relationships the ensemble is divided into three principal subgroups which are related by their spatial location.

GROUP I (comprising three duos)

Soprano (with pair of metal cup-bells, tuned to C and D)
Trumpet 1 (with cup mute)

Mezzo-soprano (with pair of metal cup-bells, tuned C# and D)
Trumpet 2 (with cup mute)

Clarinet 1 in Eb
Clarinet 2 in Eb (doubling Bb)

GROUP II*

Harmonica 12: *D# (large), C (small) ***
Harmonica 11: *D (large), C (small)*
Harmonica 10: *C# (large), C (small)*
Harmonica 9: *C (large), C (small)*
Harmonica 8: *B (large), C (small)*
Harmonica 7: *A# (large), C (small)*
Harmonica 6: *A (large), C (small)*
Harmonica 5: *G# (large), C (small)*
Harmonica 4: *G (large), C (small)*
Harmonica 3: *F# (large), C (small)*
Harmonica 2: *F (large), C (small)*
Harmonica 1: *E (large), C (small)*

*The instruments for which the piece was composed are tremolo harmonicas manufactured by Swan.

(Many of the techniques used do not work on 'blues' harmonicas, which also have the wrong timbre)

**The 'large' harmonicas are 24-hole instruments from a chromatic set, the small harmonicas in C are 16-hole instruments.

GROUP III (comprising three trios)

Piccolo
Flute
Alto flute

Percussion (1 player):

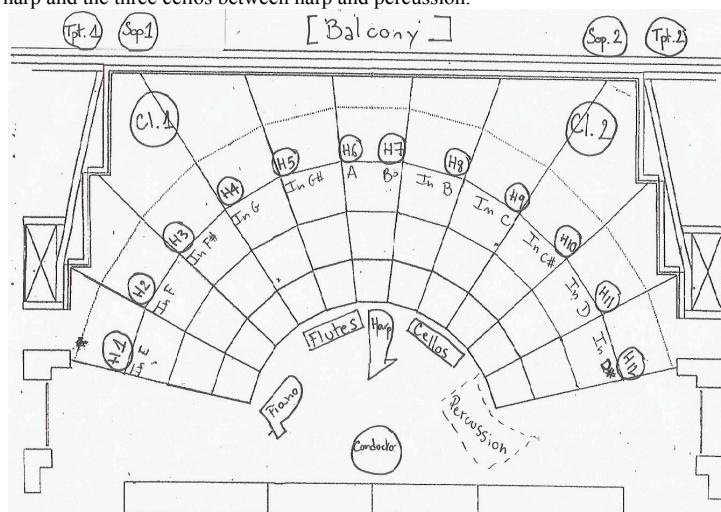

crotal, vibraphone, 2 chinese opera gongs, 4 thai tuned gongs (low E-flat, F, F-sharp, G)
Harp
Piano/Celesta

Violoncello 1
Violoncello 2
Violoncello 3

(all requiring metal practice mutes)

Spatial Configuration:

The spatial configuration of the musicians is an essential aspect of the music. Ideally the pairs of voice/trumpet should play from a balcony behind the stage; the clarinets should be in opposite corners at the back of the stage (below the voices); the 12 harmonicas should form an arc across the middle of the stage (ideally on risers); the piano (left side), harp (centre) and percussion (right side) should be as widely spaced as possible with the three flutes seated between piano and harp and the three cellos between harp and percussion.

Duration: 10 minutes

Score in C

Performance Notes:

Tuning

This is not a piece for which I envisage the possibility of a 'perfect' realisation. It is rather an opportunity to explore the relationships that arise between an unusual combination of instruments/voices which were not designed to play together in the first place, yet which to my imagination form a wonderfully coherent whole. It is from the myriad instrumental idiosyncrasies that the nature of this music is born. The presence of the 12 tremolo harmonicas creates a strange musical situation because they are not 'in tune' with the other more standardised orchestral instruments (some of which cannot adjust their tuning). This should not be seen as a problem. In this piece playing 'in tune' does not mean playing the same frequency as everyone else, it means being aware of the subtle intonational differences which must be understood as a conscious musical feature. In general, the harmonicas used by the composer are slightly (almost, but not quite a quarter-tone) sharper than the usual (A=440) tuning.

The following notational conventions should enable individual players to clarify the reference point for their intonation:

- 1) Normally stated accidentals (including quarter-tones) should be performed in equal temperament according to the standard tuning of the instrument.
- 2) Accidentals stated in brackets (normally quarter-tones) indicated that the tuning should be matched to one of the harmonicas. In addition boxed text stating "match harm. 12 tuning (slightly sharp)" (for example) will indicate which instrument to listen for:
- 3) Natural harmonics (overtones), whistle tones and any phenomena derived from the harmonic series should retain their natural tuning, though this will not be precisely indicated in the score (notation is approximate to nearest semitone).
- 4) The harmonicas are treated as 'approximate transposing instruments' sounding around a quarter-tone higher than written in the low register, while sounding slightly lower than written in the high register.

Harmonicas

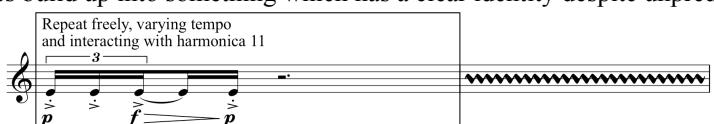

The harmonica parts are not intended for specialist players but can be played by any trained musician (ideally wind players) who is prepared to learn a few simple performance techniques. Each player has two harmonicas and a handkerchief:

- 1) Harmonica in C (small, 16-hole): everyone has the same instrument
- 2) Harmonica in one of the 12 chromatic keys (large, 24-hole): everyone has a different key from a complete set ranging from low to high as follows: in E (player 1) – in D-sharp (player 12)

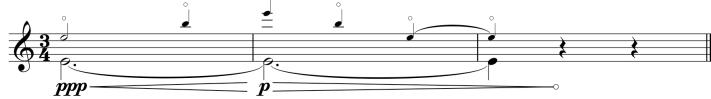

For simplicity of performance the following principles apply:

- Always play with exhalation (never inhalation which produces a different pitch)
- The only notes used are the highest and lowest holes/pitches which are not the same as the key note of the harmonica but part of its tonic triad. On the small harmonicas in C the bottom note is the third (E) and the top note the fifth (G), on the large harmonicas the bottom note is the fifth and the top note is the third.

Performance techniques:

- **Repeat boxes:** when material is presented in a box with instructions to 'repeat freely, varying tempo' the intention is to create a global texture something like a flock of birds or chorus of frogs, where many individual calls and responses build up into something which has a clear identity despite unpredictable local details.

- **Accents:** these indicate that a note should be tongued. If no accent is written the note should simply be blown.
- **Controlled overtones:** these are created by varying the tongue position between the front and back of the mouth while playing a note (in the same way that overtone change if you move the tongue while singing 'ooo'). With the tongue at the back lower overtones will be emphasised, with the tongue at the front higher overtones come into focus. The range of available overtones depends on the harmonica/note you are playing, but on the low E of the small harmonicas (in C) the first three overtones (8ve, 5th, double 8ve) are relatively easy to control by moving the tongue between three positions: back (8ve), middle (5th), front (double 8ve).

- **Fast tongue-wah:** following the same principle as the controlled overtones but moving the tongue between front and back as fast as possible to create a shimmering wah-wah/timbral trill effect

fast tongue-wah:
+o+o+o+o

- **Hanki-harmonicas:** when indicated to play 'with handkerchief', wrap the harmonica in a handkerchief (ideally folded to be two or four layers thick) and blow through it around the mid-register of the instrument. The result should be an ethereal high cluster without any of the normal pitch sounding. At louder dynamics there is a danger of normal pitches sounding, but this is never desirable. Therefore 'ff' means as loud as possible without the normal pitch sounding.

- **Pitch bend:** this is achieved by a combination of changing the angle of the harmonica in relation to the lips (turning it down by c.45 degrees), increasing the air-pressure (hence the gesture usually being notated with a crescendo), and tightening the lips. To return to a normal pitch simply reverse the process. In all cases this gesture is notated as bending the pitch by a quarter-tone, however larger intervals are possible and I would encourage players to explore/improvise different depths of pitch bend to create a more varied soundscape, using intuition to relate appropriately to the surrounding context.

pitch bend by turning
harmonica 45 degrees down

- **Sing/play in unison:** sing the note while you play it. The unison should be exact (not at the octave) which may require men to sing falsetto.

sing/play in unison

- **Sing through harmonica:** sing the notated melody while playing the bottom note of the harmonica. This always begins in unison. As above the pitch should be exact (not at the octave) which may require men to sing falsetto. Pay attention to the different speeds of frequency beats depending on the interval relationship between voice and harmonica.

sing through harm.
while playing low E

- **Flutter tongue (flz.):** as on any wind instrument, this can be achieved by rapidly rolling the tongue while playing the note.

Voices/Metal cup-bells

Each voice has a pair of metal cups (originally bought in a charity shop), to be used as bells. They are tuned approximately as follows:

A musical staff with two entries. The first entry, labeled "Soprano:", consists of three notes on the treble clef staff. The second entry, labeled "Mezzo-soprano:", consists of three notes on the alto clef staff. The notes are open circles with stems.

In addition to the pitched sound produced by clashing the cups together, a high metallic sound of indefinite pitch can be produced by clashing the feet together. Both of these sounds are required in the piece. They are notated on a separate small two-line percussion staff above the vocal line: the upper line = clash bells, the lower line = clash feet.

Trumpets

- Both players require cup mutes
 - Air noise 'sss': requires the players to hiss through their instrument without producing pitched sound (the notated pitch is arbitrary)

air noise: 'sss'

- molto vibrato should be wider than a normal vibrato, but a similar speed:

A musical staff with a treble clef at the beginning. It features a whole note followed by a series of eighth-note patterns. The first pattern consists of a single eighth note. Subsequent patterns repeat this single note, separated by vertical bar lines. The notes are connected by horizontal stems.

Flutes

- Whistle tones (W.T.): these should be improvised freely to create a fluctuating, glistening texture.

A musical staff in G clef and common time. It features ten open circles placed above the notes, representing a melodic line. The notes are distributed across the four lines of the staff.

- Breath tone: a pitched but very breathy air sound produced by blowing over the mouthpiece with the notated fingering.

Harp, Piano, Percussion

- Harp: harmonics sound an octave higher than written
 - p.d.l.t. = *Près de la table*
 - Pedal buzz should be used at the point indicated by the symbol and is generally used to accent an attack:

A musical staff for bass clef, consisting of five horizontal lines and four spaces. The bass clef symbol is at the beginning. A vertical line with a small horizontal stroke (fermata) is positioned above the first note on the staff.

- Piano: pizzicato may be executed with fingers or a plectrum.
 - Percussion: the two chinese opera gongs should ideally gliss. in opposite directions.

Cellos

- metal practice mutes are required for one section of the piece.
 - msp. = molto sul pont.
 - sp. = sul pont.
 - st. = sul tasto
 - mst. = molto sul tasto

Exit Procession

At the end of the piece the harmonica players are required to stand and exit the stage in a procession while a four bar phrase repeats on stage. Harmonicas 1 – 6 should exit via the right aisle, while Harmonicas 7 – 12 should exit via the left aisle. Players should walk slowly and there should be a sense of ritual/ceremony to the walking. During the procession the 8 members of the two groups improvise a hocketing pitch cycle with a flexible rhythm/tempo on their highest notes, while the remaining 4 players continue to repeat their notated fragments. The piece ends after the harmonicas have left the hall and are no longer audible from the stage. The conductor is responsible for stopping the ensemble together suddenly at the end of a repetition.

Text

The words are taken from the first three lines (bold) of this poem by David Gascoyne, published by Enitharmon Press.

Lachrymae

**Slow are the years of light: And more immense
Than the imagination. And the years return
Until the Unity is filled.** And heavy are
The lengths of Time with the slow weight of tears.
Since thou didst weep, on a remote hill-side
Beneath the olive-trees, fires of unnumbered stars
Have burnt the years away, until we see them now:
Since Thou didst weep, as many tears
Have flowed like hourglass sand.
Thy tears were all.
And when our secret face
Is blind because of the mysterious
Surging of tears wrung by our most profound
Presentiment of evil in man's fate, our cruellest wounds
Become Thy stigmata. They are Thy tears which fall.

The Years of Light was commissioned by Tanglewood Music Centre and first performed on August 8th 2013, at 8 p.m. in Seiji Ozawa Hall, as part of the Festival of Contemporary Music.

Cap. 1: Soprano (Sop.) sings "normal voice" with dynamic markings *p*, *mp*, *pp*, *f*, and *pp*. The vocal line includes lyrics "year", "s", "re", "tur", "n", and "un".

Cap. 2: Mezzo-Soprano (M-Sop.) sings "year", "s", "re", "tur", "n".

Harps: Multiple harps play sustained notes. Specific markings include "fast tongue-wah" with a box containing "totooooo" above Harp 12, and "fast tongue-wah" with a box containing "totooooo" above Harp 8.

Piano: The piano part consists of eighth-note patterns with dynamics *p*, *f*, and *pp*.

String Section: Cello (Crot.), Double Bass (Hp.), and Violin (Vc.) parts are shown.

Other Instruments: Flute (Fl.), Alto Flute (A. Fl.), and Trombones (Crot., Hp.) are also present.
